

# Positron Emission Computed Tomography (PET/CT Scan)

## Contents:

### Pages:

## Chapter- one: Medical Radionuclide

Medical Radionuclide production fundamentals  
2

Choice of a Cyclotron  
4

Radionuclide production fundamentals  
5

Cyclotron beam current  
5

Deuterons operation for the cyclotron  
6

Cyclotron beam current  
6

Positron Emission Tomography (PET) Scans  
principals 7

Production of the PET radioisotope, Fluorine-18  
8

Use of Fluorine-18  
9

Medical Radionuclides and its applications  
11

Radionuclides for Imaging  
16

Radionuclides for therapy  
19

General Uses of Nuclides  
21

## Chapter- two: Accelerators

Accelerators  
23

DEVELOPMENT OF LINEAR ENERGY  
ACCELERATORS 23

Principle of operation  
24

Radiofrequency acceleration  
25

Structure of the LINAC  
25

Radiofrequency quadruple  
27

DEVELOPMENT OF CYCLOTRONS  
28

Principles of operation  
29

Radiofrequency acceleration  
31

Ion sources  
33

Extraction systems  
35

Current cyclotrons  
37

Negative and positive ion machines  
37

Extraction of beams  
38

Energies and particle  
39

Tandem cascade accelerators  
40

Van de Graaff accelerators  
41

Superconducting cyclotrons  
42

CHOICE OF AN ACCELERATOR  
43

Comparison of cyclotrons with other accelerators  
43

Radioisotope yield considerations  
45

Characteristics of commercial cyclotron  
46

Operating costs  
52

## **Chapter- three: Targets and Targetry**

Targets and modules  
53

Apollo F-18 Target  
55

Target materials  
58

FLUORINE-18  
59

Decay mode  
60

Nuclear reactions  
60

Excitation functions  
63

Calculation of Eb/n for  $^{18}\text{O}$  nucleus  
63

Recovery of enriched materials  
68

Yield of F-18  
69

Enriched Water transfer  
69

Extraction System:  
70

**Target processing**  
72

Synthesis of FDG  
73

Commercial modules for synthesis of FDG  
74

Enriched Water Distillation  
77

Quality control of  $^{18}\text{O}$  water  
78

Maintenance schedule for water targets  
78

Basic components of a PET system  
79

Crystals used in PET  
81

Recent developments of PET/CT systems  
82

## **Chapter four: Laboratory design**

Laboratory design  
83

Airflow  
84

Radiation level gradient  
85

Work flow  
85

Regulation and guidance  
86

Problems and solutions for 511-keV photons  
88

X-ray considerations  
92

PACKAGES AND TRANSPORTATION OF  
RADIOISOTOPES 95

## **Chapter – five: Maintenance**

Operating costs  
98

Maintenance  
98

Maintenance schedule  
99

Level I: Routine maintenance  
99

Level II, Preventive routine maintenance  
99

Level III: Major repairs and replacements  
99

Obtaining a list of recommended spare parts  
100

Maintenance and service agreements  
103

## **Chapter-six: Radioisotope Production**

RADIOISOTOPE PRODUCTION  
106

NUCLEAR REACTIONS  
108

Coulomb barrier  
109

Q value  
110

Nuclear reaction cross-section  
112

CALCULATION OF RADIOISOTOPE YIELD  
113

Saturation factor  
117

Nomenclature  
121

## **Chapter-seven: Practical radiation protection and safety in PET-CT**

PET dosimetry  
122

CT dosimetry  
124

Overview of factors affecting radiation dose in CT  
125

Displayed CT dosimetric quantities  
126

PET-CT dosimetry  
126

The Staff  
129

General principles of radiation protection  
129

Radiation safety in FDG PET-CT studies  
130

Physical characteristics of  $^{18}\text{F}$   
131

Risk of Exposure  
132

Practical steps to control external exposure  
133

Optimization of staff exposures  
134

Experienced radiographers and nuclear medicine technologists  
135

Adequate dispensing pots  
136

Syringe shields  
137

Shielded trolley  
138

Monitoring of occupational exposure  
142

Computation analysis of MRI, PET-CT images  
144

### **Stock images of PET-CT**

PET-CT structure, components, safety aids (29 images)  
149

Pathogenic, functional and neuro research cases images (94 images)  
165

### **Appendix I - PET CYCLOTRON COMPARISON 244**

### **Appendix II- HIGH ENERGY CYCLOTRON COMPARISON 252**

### **Appendix- III- Introduction to Radiation and Nuclear Chemistry 258**

The Atom  
258

Ionization:  
260

X-ray Emission	260	Nucleus Radius and Potential Barrier	278
The Spectral Lines of hydrogen atom	261	Nucleon - Nucleon Forces	280
Mössbauer effect	263	Meson Theory	282
Atomic structure and nuclear properties	263	Elementary particles of the nucleus	284
Nucleus volume	264	Radioactive decays and radioactivity	289
Structure of Nucleus	266	The Rate of Decay of a Radioactive Nucleus	291
Electron –Proton Hypothesis	266	Calculation of half life of the nuclide	292
Discovery of the Neutron	267	Secular equilibrium decay	293
Proton- Neutron hypothesis	267	Transient equilibrium	294
Nuclides and Nucleons	267	The case o no equilibrium	295
Isotopes, Isotones , Isobars and isomers	268	<b>Natural Decay Series: Uranium, Radium, Thorium</b>	<b>297</b>
Nuclear Properties	269	Uranium – 235 decay serious	<b>298</b>
Electron Volt	269	Thorium – 232 decay serious	299
Nucleus Binding Energy	270	Uranium – 238 decay serious	300
Mass defect	272	Neptunium – 237 decay serious	301
Packing fraction	273	<b>References</b>	
Lamart-Swiatecki Relationship	273	<b>303</b>	
Nuclear Shell Structure and Magic Numbers	276		
The Collective Model of the Nucleus	278
